Big Brother Incorporated

A Report on the International Trade in Surveillance Technology
and its Links to the Arms Industry

London

November 1995

**PRIVACY
INTERNATIONAL**

www.privacyinternational.org

Summary

This report presents a detailed analysis of the international trade in surveillance technology. Its primary concern is the flow of sophisticated computer-based technology from developed countries to developing countries – and particularly to non-democratic regimes. It is in this environment where surveillance technologies become technologies of political control.

Surveillance technologies can be defined as technologies which can monitor, track and assess the movements, activities and communications of individuals. These include an array of visual recording devices, bugging equipment, computer information systems and identification systems. These innovations are used by military, police and intelligence authorities as technologies of repression.

The surveillance trade is almost indistinguishable from the arms trade. More than seventy per cent of companies manufacturing and exporting surveillance technology also export arms, chemical weapons, or military hardware. Surveillance is a crucial element for the maintenance of any non-democratic infrastructure, and is an important activity in the pursuit of intelligence and political control. Many countries in transition to democracy also rely heavily on surveillance to satisfy the demands of police and military. The technology described in this report makes possible mass surveillance of populations. In the past, regimes relied on targeted surveillance.

Big Brother Incorporated is the first investigation ever conducted into this trade. Privacy International intends to update the report from time to time as more information becomes available.

The report identifies the trade with such countries as Nigeria, China, Angola, Rwanda, Zambia and Indonesia. More than 80 British companies are involved, making the UK the world leader in this field. Other countries, in order of significance, are the United States, France, Israel, the Netherlands and Germany.

It is derived from company information, trade fair data, annual reports and media reports. It lists the companies, their directors, products and exports. In each case, source material is meticulously cited. Addresses and contact numbers are as current as possible but in some cases these will be out of date.

Overview of the report

Numerous investigations and reports in the past decade have highlighted the extent to which the global arms trade nurtures and supports brutal and repressive regimes across the world. The industry and its participants have been put under the microscope by a number of parliamentary inquiries in Europe and North America. Without exception, these have uncovered a complex and profitable trade with few controls and with no ethical compass.

Big Brother Incorporated is concerned with a parallel activity involving many companies involved in the arms trade. The international trade in surveillance technology (sometimes known as the Repression Trade) involves the manufacture and export of technologies of political control. These technologies involve sophisticated computer-based technology which vastly increases the power of authorities.

Amongst the products involved are:

- telephone interception equipment
- bugging devices
- police and military information systems
- ID cards
- “System X” telephone systems
- communications logging systems
- micro-cameras
- parabolic microphones
- automatic transcription systems
- infra red scopes
- night vision equipment
- advanced CCTV equipment
- geographic information systems
- vehicle tracking technology
- automated fingerprint systems
- biometric technology
- cellular intercept systems

- computer intercept systems
- crowd analysis and monitoring technology
- data matching programs

Much of this technology is used to track the activities of dissidents, human rights activists, journalists, student leaders, minorities, trade union leaders, and political opponents. It is also useful for monitoring larger sectors of the population. With this technology, the financial transactions, communications activity and geographic movements of millions of people can be captured, analyzed and transmitted cheaply and efficiently. The emerging information and communications infrastructures of countries can be hijacked for limitless surveillance purposes.

In the absence of meaningful legal or constitutional protections, such technology is inimical to democratic reform. It can certainly prove fatal to anyone "of interest" to a regime.

Western surveillance technology is providing invaluable support to military and totalitarian authorities throughout the world. British computer firm ICL (International Computers Limited) provided the technological infrastructure to establish the South African automated Passbook system, upon which much of the functioning of the Apartheid regime depended. In the late 1970s Security Systems International supplied security technology to Idi Amin's brutal regime in Uganda.

In the 1980s, Israeli company Tadiram developed and exported the technology for the computerized death list used by the Guatemalan police. Meanwhile, companies such as PK Electronics routinely provide the Chinese authorities with bugging equipment and telephone tapping devices.

The extent of Western support for inhumane regimes is widespread. The notorious human rights abuses in Indonesia – particularly those affecting East Timor – would not be possible without the strategic and technological support of Western companies. Amongst those companies supplying the Indonesian police and military with surveillance and targeting technology are Morpho Systems (France), De la Rue Printak (UK), EEV Night Vision (UK), ICL (UK), Marconi Radar and Control Systems (UK), Pyser (UK), Siemens Plessey Defense Systems (UK) Rockwell International Corporation (USA) and SWS Security (USA). These and other corporations supply the intelligence gathering and identification systems necessary to pursue a program of ethnic cleansing.

This technology is exported to virtually all countries with appalling human rights records. Nigeria is supplied by such companies as Codalex (Canada) and Continental Microwave (UK). Companies supplying to Chinese authorities are numerous, but include Phillips (Netherlands) EEV Night Vision (UK), GEC Marconi (UK), GPT-Plessey Telecom (UK), Pilkington PE Ltd (UK) and Siemens Plessey (UK).

The Thailand Central Population Database and ID card system, developed by the US based Control Data Systems, involves sophisticated intelligence that has been used

for political purposes by the Thai military. This integrated system creates an ID card, electronic fingerprint and facial image, and electronic data link involving the entire population. It spans most government agencies and is controlled by the powerful military/police dominated Interior Ministry.

Databases in the Thai system include: Central Population Database, National Election System, Political Party Database, Political Member Database, Voter listing, Electronic Minority Group Registration System, Electronic Fingerprint Identification System, Electronic Face Identification System, Population and House Report System, National Tax Collection System, Village Information System, Secret Information System, Public Opinion System, Criminal Investigation System, National Security System, Social Security System, Passport Control System, Driver Control System, Gun Registration, Family Registration, Alien Control System and Immigration Control System.

Similar ID card and "smart" card systems have been marketed to more than two dozen developing countries. Without exception, they result in wholesale discrimination and hardship for vulnerable people. Such systems can adversely affect the delicate balance pursued by an emerging democracy. The adoption of Information Technology (IT) involves a change to the relationship between citizen and the State. The use of surveillance technologies vastly increases this change.

The justification advanced by the companies involved in this trade is identical to the justification advanced in the arms trade – i.e. that the technology is neutral. Privacy International's view is that in the absence of legal protections, the technology can never be neutral. Even those technologies intended for "benign" uses rapidly develop more sinister purposes. The UK manufactured "Scoot" traffic control cameras in Beijing's Tianamen Square were automatically employed as surveillance cameras during the student demonstrations. Images captured from the cameras was broadcast over Chinese television to ensure that the offending students were captured.

The emerging Information Superhighway also poses fundamental threats to developing countries (the Superhighway is a metaphor for the convergence of information and communications systems to form a national and international information web. The 1995 summit of the G7 (the seven richest industrial powers) linked arms with some of the most dominant corporations in the technology industry to form a consensus about how the Superhighway should be built. They agreed to a set of principles that would maximize growth, development and profit. Relatively little attention was paid to the negative impact of the Superhighway on developing countries and on the rights and privacy of citizens of all countries.

Martin Bangermann, Europe's Commissioner in charge of information technology, has remarked "We will not achieve the Information Society unless we give the free market a free rein". In the context of the trade in surveillance technologies to third world countries, this signals a "hands off" policy. An unregulated Superhighway is likely to maximize surveillance and increase the power of institutions in control of the technology.

It should be a source of grave concern that the world's telecommunications and

computer companies have been moving to force government to back away from regulating information technology. In 1994, under the leadership of US Center for Strategic and International Studies (CSIS), a consortium of the world's leading companies have formed the Global Information Infrastructure Commission (GIIC). Headed by the president of Mitsubishi, the chairman of EDS, and the vice chairman of Siemens Corporation, the GIIC intends to create a conglomerate of interests powerful enough to subsume government interest in regulation.

The effort is being funded to a large extent by the World Bank, which in early 1994 appears to have been persuaded by CSIS that unregulated economic investment was more important to developing economies than social and political reform. The corporate sector, argued CSIS, can deliver this economic reform along the Superhighway. And they can do it best if they, not the governments, take the lead.

The unregulated development and export of these technologies creates grave and unnecessary threats to developing countries. The trade requires scrutiny and regulation to help minimize the fatal impact that it can cause. Whether this impact is intended or unforeseen, the surveillance industry has a responsibility to ensure that the export and development of its products conform to scrupulous ethical standards. Developed countries should ensure that the export industry is regulated. Technological assessment must be a pre-requisite.

This report is by no means comprehensive. It omits numerous government-led systems. For example, the notorious PROMIS surveillance software marketed throughout the world by the US Justice Department has led to widespread fears about the creation of an international tracking system for individuals "of interest". The US, French and British governments' moves to limit effective encryption systems is also of profound importance to developing countries, but is not dealt with in any detail here. These and many other issues will be explored in updates of [Big Brother Incorporated](#). We are hoping that interested people will contact us to provide further information on this trade. We also welcome "clarification" of the facts by the companies named in this report.

Privacy International wishes to acknowledge the invaluable advice and assistance of a number of people and organizations in the preparation of [Big Brother Incorporated](#). Because of the sensitive nature of the report's contents, we have agreed that they should remain anonymous. However, the invaluable support of the Electronic Privacy Information Center (EPIC) in Washington DC is gratefully acknowledged.

The report was prepared on an entirely voluntary basis. It has not been financially supported by any individual or organization.

About Privacy International

Privacy International was formed in 1990 as a non-government, non-profit organization. It brings together privacy experts, human rights advocates and technology experts in more than 40 countries, and works toward the goal of promoting privacy issues worldwide. The organization acts as an impartial watchdog on surveillance activities by governments and corporations.

Privacy International publishes the International Privacy Bulletin, and holds two conferences each year, in addition to conducting a variety of campaigns and investigations. PI also maintains an electronic mailing list to distribute releases and announcements. To subscribe, send a message to pi-news@privacy.org with the subject "subscribe" (no quotes).

Codalex Ltd

**5780 Decelles Avenue
Montreal Quebec H3S 2C7
Canada**

Tel: 514 731 3251 Tlx: Fax: 514 738 1970

Source Ref: Canadian Security Products & Services, August 93 (Copex 94)

Export/Imports:

Canadian Security Products 8/93: Export Markets: Codalex systems and accessories are in use by the military forces of the following countries: Argentina, Australia, Canada, Cyprus, Nigeria, Saudi Arabia, Spain, USA, Zambia and several other countries that have received equipment through the US Foreign Military Sales (FMS) program.

Additional Information:

Canadian Security Products 8/93: Codalex Ltd is a Canadian owned corporation incorporated in October 1975. Codalex designs and manufactures military multiplex systems and accessories. Codalex's principal customer is the US Department of Defence with major systems and accessories being supplied to the US Marine Corps and US navy. In addition to work for the US DoD, has designed and manufactures communications and control systems for the Saudi Arabian Air Defense Systems under contract to Litton Data Command Systems (US) and Thomson CSF (France).

Gross Sales \$4M, Export Sales \$3.8M, Ratio Commercial/Defence 1:99. date of profile 14 Feb 1992.

PICS – Photo Ident Card Systems, Ltd

**5317 Lane Street
Burnaby BC V5H 2H4
Canada**

Tel: 604 434 1321 Tlx: Fax: 604 434 1821

Export/Imports:

Copex Miami 93 – US Distributor in Florida.

Additional Information:

Copex 94: Spectronic products and customer designed control systems, of electronic surveillance and countersurveillance have been supplied to friendly governments throughout the world. At Copex 94 Spectronic will be displaying equipment covering the following areas: Fax Monitoring, Room Monitoring, Telephone, Modem and Cellular Monitoring, Radio Bug Detection, Frequency Hopping Wireless Micro Transmitter, Jamming.

Milipol 93: Telefax monitoring program, Jamming systems, fax recorder control systems, radio bug detection system, room monitoring systems. Since 1983, Spectronic have been developing and producing advanced equipment for electronic information gathering, surveillance and counter-surveillance.

Copex Miami 93 – Fax monitoring, Room Monitoring, Radio Bug detection, Jamming, Videolink.

Securitech 93 – Jamming systems – sweep jammers, broadband jammers, manpack systems, mobile systems. Fax recorder control systems. Telefax monitoring program, Radio bug detection system, Room monitoring systems:- advanced wired microphone systems for – Passive lines, Active telephone lines, Active 220V main. Since 1983, Spectronic Denmark have been developing and producing advanced equipment for electronic information gathering, surveillance and counter surveillance.

Copex 93: Since 1983, Spectronic have been developing and producing advanced equipment for electronic information gathering, surveillance and counter-surveillance.

Supplied to friendly Governments throughout the world. Fax monitoring, Room Monitoring, Radio Bug Detection, Jamming.

COPEX 90 – Electronic surveillance & counter surveillance equipment – in conjunction with customer designed control systems, DEX 017 System – Counter surveillance systems, SP900 Microwave videolink.

Giza Systems Engineering

95 Catalog Exhibition: EUROSATORY 92, Eurosatory 94, IDEX 95

Export/Imports:

Co Info 6/94: Alcatel SEL is the sole supplier of VHF radio and radar land-surveillance equipment in Germany.

Additional Information:

Euro 92: Infrastructure networks, C3I systems, space systems, tactical networks, security systems.

Co Info 6/94: With global sales of ECU 23.7 billion and 200,000 employees worldwide, Alcatel Alsthom is one of the world's 40 largest industrial companies. Alcatel Alsthom: Defense & Security Activities: Total group sales ECU 1.2 billion.

Communications systems: provides systems, equipment and services for military infrastructure networks.

C3I systems: Based on skills acquired with STRIDA, the French surveillance and air

defense data processing system., the group is developing C3I systems for air defense, troop management, intelligence, frontier surveillance, and various other applications. Its intelligence products handle data acquisition and processing in command centres. The group has also developed numerous systems for preparing and conducting missions. One of the most widely known is the SAFARI systems, used by the United Nations (UN) in Somalia.

C3I systems: Alcatel provides a full range of C3I systems dedicated to Army, navy and Air Force as well as Police and Civil Security, Border Surveillance or any other Command & Control driven body. Systems feature a complete set of integrated command and control supporting functions ranging from data collection and fusion, situation assessment, force and resources management, planning and tasking and operation control. C3I systems are displayed to illustrate four levels command chain: strategic operational tactical combat & execution

Strategic level: JCOC (Joint Command Operation Centre) SICOIA, intelligence processing and photo-interpretation system (DEIMOS), satellite situation display (MUSCAT), forces/resources management system (SGFM), multi-media integrated management platform (BDS).

Operational level: Theatre JCOC – a deployable C2IS providing support to commanders in charge of theatre operations. TJCOC is equipped with command, control information system (SAFARI) comprising two workstations: whole theatre data fusion situation assessment support tool taking account of friend as well as foe forces.

Tactical level: A deployable Interoperable Air Command and control modular system (DIAMS) for air-land battle operation supports the tactical level. The system includes:

an intelligence processing and photo-interpretation module (DEIMOS), a multi-sensor intelligence fusion system (AXIS), a planning and tasking module (PEGASUS) forces and resources management module (SGFM) a tactical situation display (VISU tactique)

Combat/execution level: Illustrated by a segment dedicated to image acquisition and first level processing into a SAFARI dedicated system. The resulting intelligence data (IMINT) are transmitted to the tactical level and the operational level where they are fused and integrated into a SAFARI component.

Surveillance Systems: Based on the Border Master 2000 on area surveillance system performing intelligence data acquisition from multipurpose battlefield radar RATA-C-S and providing decision support tools.

IDEX 95: Communication systems – tactical command and control infrastructure

Alcatel Radio Space Defense

**5, Rue Noel
Pons 92000 Nanterre la Defense

Export/Imports:

Milipol 91: Distributor for EGIS & Sentor produced by Thermedetec Inc (USA), Alcatel Communications Systems

Additional Information:

IDEX 95: Engineering, manufacturing and commercialisation of electronic surveillance and security devices for police, army etc.

Co info 2/95: Engineering, manufacturing and commercialization of surveillance and safety devices for Police, Army and authorities.

Distributor for detection systems: EGIS explosive detection system, SENTOR drug detection system.

Telephone auto-start COF-030, connected to a telephone makes it possible to trigger the operation of a tape recorder or micro-transmitter in order to record the contents of a telephone conversation.

Voice Timer COF 040, voice activated trigger; transmitter microphones COF 112, 118, COF 110, 113, 150, 111.

Miniaturized telephone listening-in system COF 117; Fax interceptor COF 230; multiple/single line fax interceptor COF 231, Multiple Lines Fax interceptor COF 231/M.

Ciphered telephone sets COF 270, encoding and decoding modules for transmitting and receiving COF 274, Encoded Audio Transmitter/Receiver with remote control COF 310/2, COF 320/R, COF 230/E, COF 310/R.

Miniaturized micro transmitters COF 310, 311; transmitter belt COF 348,

Video micro camera COF 357; TV transmitter 430–550 MHz COF 363; Camera Box with integrated video transmitter COF 368; video mini camera COF 370, Video Camera Module COF 371; Portable HF video set COF 383; TV transmitter 950MHz – 2.5 GHz COF 393E; Video transmitters and demodulator set COF 393 E, COF 393 R, Receiver antenna; HF Microphone detector COF 410; HF transmissions detector COF 411; detector for active and passive microphones COF 430; Detector/Jammer for carrier current micro-transmitters COF 435; detection attache case COF 480.

Parabolic microphone – this very light carbon fibre system is especially designed for picking up sound from a distance COF 505,

EMC/EMI Receivers COF 510, COF 511, COF 512.

Telephone line recorder with voice synthesizer COF 555. Directly connected to the telephone line, this device can record all conversations from the line and all dialled pulsed and DTMF phone numbers. Digital Telephone recorder COF 590.

Infra-red video for vehicles screening COF 560,

Night monitoring system with camera COF 600, Recording scanner receiver COF 620, Radio relay unit COF 634.

Small recording case COF 640. Attache case for extra-discreet recording of conversations in ambient surroundings. When connected in parallel with a telephone line, it records calls. Even when open, the attache case remains perfectly anonymous. Wire listening-in device COF 643. This equipment is designed to provide efficient assistance by acoustic monitoring of locations. It serves to listen- to noises and conversations throughout the audible AF spectrum, either in mono or stereo. Multi-wire listening-in device COF 653.

Video surveillance attache case COF 666. Intended for on-off operations, this fully self-contained case provides discreet automatic surveillance of a given area, by making a sound and picture recording on a 8mm video cassette.

HF video monitoring unit COF 740.

Multi-function surveillance lamp COF 748. This standard lamp enables discreet remote surveillance and transmission of pictures and sounds of all movements inside a camera shooting angle. An entire audio and video transmission set s hidden inside the standard lamp.

Jamming transmitter COF 800. This complex signal transmitter is designed to jam radio transmissions, even coded transmissions, or to saturate nearby receivers. Protection emitter COF 815 designed to jam radio waves to ensure convoy protection from bombs or other explosive charges by rendering their ignition by a radio-controlled system impossible.

Perimeter surveillance system COF 825.

Tracking system COF 888. Installed in a vehicle, this system makes it possible to

follow, from a distance, another vehicle under which a transmitting beacon has been installed. Rane 800m in the city to 7–8Km under ideal propagating conditions.

Infra-red audio transmitting/receiver set. COF 1908.

INDEPO 94: Tracking system with optional Travelpilot COF 888.

Copex 94: Designing, manufacturing and marketing high performance electronic surveillance and security devices for Police, Army and Public Authorities throughout the world for over more than 15 years. On display at Copex:-audio and video surveillance, fax interception, detection, jamming, tracking, tempest applications.

Radio electric tracking systems fitted on all kinds of mobile supports.

Data Mast

**ZAC du Moulin – Rue de l'Arpajonnais

Export/Imports:

Milipol 91: Distributers for SCHLUMBERGER, OUTOKUMPU (Finland), Sector 6, Blindart, C.S.D. (UK), Wallop-Maxon-Italdis, PW Allen (UK)

Additional Information:

Securitech Europe 91: Video Surveillance Systems, Magnetic & Infra Red Detectors, Structural Armour

Milipol 91: Rents security equipment – Detector gates, Controlix, Access Monitors, TW, Provides staff qualified, trains staff in methods & specific products & regulations, Mine clearance equipment – Mk4 Bomb Disposal Outfit (Wallop ?), Surveillance ? Counter Surveillance – Listening devices, micro devices, video & wireless devices, anti-terrorist systems, night vision, weapon detection equipment, Access Control & monitoring systems, radio communications.

Milipol 93: Is a French company with experience in two main fields of activity for over 21 years:

Protective equipments (Police, Defence, Special Services) ; persons and goods security.

Mine Clearance and Bomb Disposal equipment, Surveillance / Counter surveillance, High Security Identification, Explosive and metal detectors,

Peripheral Protection – by moving or stationary marker systems, by underground

systems, by suspended systems.

Video Surveillance: CCD video cameras, B&W or colour, Matrix, Uniplex, Quads, Switchers, American Dynamics, lenses, video pictures by modem, night vision. Radio communications.

DICAR SA

**4, rue des Repos
75020 Paris
France**

Tel: (1) 43 70 62 96 Tlx: Fax:

Exhibition: Milipol 93

Export/Imports:

Milipol 93: French distributor for Comverse Technology Inc (CTI)

Additional Information:

Milipol 93: DICAR SA is the distributor in France for CTI

AUDIODISK systems, developed by CTI's Government Systems Division, are designed to provide a complete environment for telecommunications monitoring and processing activities.

Two individual orders in excess of US \$20 million and \$14 million – the largest orders for products of this kind ever – have been granted to CTI in 1992.

The AUDIODISK systems are also used by commercial and financial organisations, including logging of financial transactions and automated transcription systems for parliaments and similar users.

TRILOGUE, developed by CTI Commercial Systems Division, primarily for message management and information distribution.

CTI markets its products worldwide directly and through leading international distributors in telecommunications. The TRILOGUE message management system has been selected by AT&T for distribution in more than 60 countries.

Exhibition: MILIPOL 91, Milipol Moscow 92, Milipol 93

Export/Imports:

Milipol 93: The first MORPHO system was sold to the French Ministry of Interior. In Europe, Austria, Germany, England & Wales, Scotland and the Basque country province in Spain are using Morpho AFIS. In the Middle East and Asia, Morpho has already installed systems in Kuwait, United Arab Emirates, Hong Kong, and Indonesia.

Echoes 12/3/92: DM 60 million contract to supply the German Ministry of Interior with an Automatic Fingerprint Recognition system.

Co Info 91 – Morpho AFR systems used in France (National Police) 1985, Indonesia (National Police) 1989, Hong Kong (Royal Police) 1989, Austria (National Police) 1989, Spain (Basque Province) 1990, USA (various states) 1986–90, other agencies – ministry for foreign affairs (OFPPA) France, Scottish Criminal Record Office, Hertfordshire Constabulary.

Additional Information:

Milipol 93: Morpho Systemes main goal is to develop and produce Automated Fingerprint Identification Systems (AFIS), also referred to as Automatic Fingerprint Recognition (AFR). These systems are used for the management of civil information concerning individuals and for law enforcement and public safety applications. Sagem also has a subsidiary in Tacoma, North American MORPHO Systems, Inc

(NAMSI), meeting the marketing demands in USA & Canada.

Exhibited at Milipol Moscow 11/92

Echoes 12/3/92: Automatic fingerprint recognition equipment supplied to German "Land regions" over the next five years.

Fingerprint ID Kits (PN 3999991)

Co Info 11/91 – Owned by French State owned financial state institution that manages all the funds of the savings institutions in France.

Produce Fingerprint recognition systems – AFR (Automatic Fingerprint recognition systems) & AFIS (Automated Fingerprint Identification system) – System exported to Indonesian Police.

Export/Imports:

Milipol 91 – Activities extend to over 70 countries worldwide – French Armament Export Agency.

Additional Information:

IDEX 95: Exhibiting as part of national group (France).

Milipol 91 – Main role to export land based & naval weapons systems.

Co Info 11/91: Established in 1939, SOFMA has been devoting its activities to export of ground equipment since 1954. Its area was expanded to include naval equipment in 1980 when it was merged with SOFREXAN and SOMELER. Shareholders represent private and nationalised firms. The companies activities extend to more than 70 countries in the five continents.

Army weapons: armored vehicles: AMX Leclerc, AMX 40, AMX 32, AMX 30, AMX 10 families, wheeled and tracked. artillery: self propelled gun, 155 AUF 1, towed gun 155 TRF 1 and light gun 105 LG 1. Antiaircraft artillery; 25mm and 20mm single or twin gun turret or towed mountings. Individual weapons in particular FAMAS and FRF 2, retrofits (AFVs of all types), munitions, mines, NBC equipment.

Equipment for which private manufacturers are prime contractors: wheeled vehicles (armoured or soft), special equipment for airborne troops, security-forces equipment, battlefield and base surveillance systems, mortars, anti-tank rockets and missiles,

ammunition, mines, radars, lasers, radios, NBC equipment, simulators.

Security equipment: security forces equipment, protection, detection and neutralizing equipment, anti-intrusion devices, automated digital image retrieval systems, automatic surveillance and control systems.

Export/Imports:

JDW 8/6/91: Revenues by geographical area are: USA \$166m, 46%), Israel (\$65m, 18%), other (\$132m, 32%).

Defense News 11/92 – Contract with IAR (Romania) to upgrade Puma Helicopter Avionics.

Additional Information:

Co Info 4/94: Border Security Systems – Multi Layered Systems for the Multi Threat Environment. “The system performs continuous monitoring and surveillance of potentially suspect infiltrators, within a given time frame, preventing their entry into National Territory. These multi sensor systems are no longer an option but an essential to assure: Early warning, Remote and on-border detection, Identification of illegal activities, Classification and situation assessment by transforming raw data into essential information, Interception of potential intrusions and engagement.

Early Warning Elements Ground Surveillance Radar (GSR), Long Range Observation System, Observation Posts (Fixed or mobile).

Command, Control & Communication element.

Response and Intervention Forces. Border Patrol Forces, mobile and stationary Intervention and Interception units, equipped with Elbit equipment, directed by observation/surveillance posts,

Electronic Fence. Either concealed underground or true physical barrier which will provide alarm in case of intrusion.

Coastal Security Systems.

COIN 92/3 – Yuval D long-range TV surveillance system – is a portable video surveillance system for target detection, recognition, identification and inspection – in daylight can detect a vehicle at 35km away & identify it at a range of 25km. Yuval D/N long range day/night LLTV surveillance system.

Milipol 91 – Multi purpose Tactical consoles, Sniper C3 – Total simulation control, Intelligence for firing, Coordination of simultaneous firing by five or more snipers, Allocation of targets, IS-10 Real time Visual Battlefield intelligence, Yuval – Low light level surveillance systems, IRIS IR Imaging systems, IRTV 445L LORIS, IRTV 445G – Large Area coverage, ideal for aerial surveillance, Search & rescue, Chase – Detection & Alarm for nerve & blister (H) agents, quick response intervention forces.

Co Info 11/91: Command & Control centers, multipurpose tactical consoles, Sniper C3: Total situation control, intelligence for firing, allocation of targets, co-ordination of simultaneous firing by a group of five or more snipers.

Remote Sensing and multi-sensor systems: Yuval – A family of low-light level surveillance systems. Real time TV image transmitted to multiple users, 24 hours around the clock, in any weather, up to 35km detection ranges; 25km recognition range.

IR Imaging systems: IRIS – rugged, one piece scanner/viewer for aiming, IRTV 445L LORIS long range infrared telescope, TV compatible infrared vision system.

IRTV 445G for large area coverage, ideal for aerial surveillance, search & rescue operations, installable on helicopter, aircraft or marine vessels.

CHASE – detection and alarm in the presence of nerve (G&V) and blister (H) agents.

FALCON – combat optical gunsight, unrestricted field of view, firing with both eyes open.

JDW 8/6/91: Elbit sees its growth areas in “smart” munitions, helicopter avionics, threat warning and observation devices, and security systems.

COIN 90 – Yuval D Long Range TV Surveillance system, Yuval D/N Day/Night, Elbit Falcon Optical Sight, Elbit Snipers Co-ordination Unit.

IDEC 88/9: REVEAL – Real Time Electronic Video Enhancement at long range. REVEAL is an add-on electronic unit designed to boost the capabilities of electro-optical surveillance systems. Suggested applications: Long range visual surveillance/ observation systems, FLIR systems, Video signals received through communication links.

FALCON Combat Optical Gunsight is a compact aircraft type Head-UP display mounted on the front end of the rifle enabling firing with both eyes open and an unrestricted field of view. Aiming is performed by placing the luminous red dot projected on the optical window of the gunsight, on the target. The hit will be wherever the red dot overlays the target. Red dot is only visible to the gunner.

Export/Imports:

CO Info 8/93 – Distributor in Israel for Electronic Security Products Co.

Additional Information:

ISR Spring 93 – “Specialists in electric shock mechanisms, which run off standard 9v

batteries, pump out 50,000 volts, but generate a non-harmful 5- milliamps of current” The Zapper is not considered a weapon in Israel, requires no licence and costs only \$30. Also produce a selection of briefcases, police batons and a transparent riot shield with the shock circuit built in.

A selection of bugs/counter surveillance equipment. Security World are looking for distributors in various parts of the world.

Co Info 8/93 – “Established in 1989 Security World specializes in the field of security, with its involvement spanning several inter-related areas of activity. The company is engaged in the research, development, manufacture and marketing of a broad spectrum of high standard protection products, as well as the marketing and sale of products that are compatible with its own line. A subsidiary company, Security World Projects, handles the design and implementation of comprehensive turnkey projects in the field of security.”

“Security World’s unique line of protection products is based on the electric shock principle. All of the products’ shock units deter, but are certified not to cause any harm to the users. The product line is divided into two groups: Products based on physical contact between the attacker and his/her target: * Electric Shock fist unit (50,000 V). This small self-defense system stuns an attacker through a powerful electric shock. During operation it emits loud noises and sparks. The attacker suffers an extreme muscle spasm, disabling him/her.

Startek Engineering

Taiwan

Source Ref: Journal of the Electronics Industry, 9/92, page s27, Asian Sources Electronics, 8/93, p451, International Fire & Security Product News 9/94, p12, Intersec 9/94, p309, Co Info 11/94 (Avalon Technology Ltd)

Export/Imports:

Jnl Electronics Ind 9/92: FIC2000-I fingerprint recognition control system. Fingerprint card is popular in Taiwan, Indonesia and Hong Kong.

Asian-Elec 8/93: Startek hopes to export 500 fingerprint identification control systems in 1993.

Co Info 11/94: Distributors/manufacturers in UK appear to be Avalon Technology Ltd (Wirral) and Startek Engineering Ltd (Alsager)

Additional Information:

Jnl Electronics Ind 9/92: Startek Engineering will market a Fingerprint recognition control system which has wide applications. The FIC2000-I is a half automated system in the monitoring and engineering areas. Expanded security applications also include military uses. Startek will also be introducing security related computer IC cards.

Dr Wen-Hsing Hsu, designer of the fingerprint system, says that sales of the fingerprint recognition market is growing at a double rate and estimates that the world market for them is between 6000–10,000 sets per year.

Access ID Card Equipment (3579910)

Asian-Elec 8/93: Fingerprint Identification systems,

Int'l Fire & Security Product 9/94: Startek Fingerprint verifier makes use of the unique and unchangeable characteristics of personal fingerprints. The whole verification process takes just 3 seconds. The features of each live scan fingerprint are extracted into a miniature file for matching. By reducing this file to only 256 bytes, database requirements are significantly reduced and the fingerprint template can easily be stored on card systems (smart cards, optical cards etc).

Export/Imports:

Copex 94: Re-equipping and training of Palestinian Police Force.

UK Prison Service exclusively use PR-24 (Monadnock, USA) side handled baton.

COPEX 92 – Offices in Washington, Halifax (Canada), Riyadh, Kuwait City.

COPEX 91 – CDS has won some of the worlds largest contracts in Riot Control equipment & associate training.

Major consultant with Saudi Arabia advising on defence & internal security matters.

Also photographs on display showing Police/Riot training (& equipping ?) in Mexico.

Additional Information:

Copex 94: Public Order and Special Operations Equipment, Research, Development and Training.

Civil Defence Supply is a registered defence contractor involved with research, development and manufacture of Police and Military products. The company is represented worldwide, holds numerous NATO and MOD Stock Codes, is a registered Firearms Dealer and has a Home Office Section 5 Authority. Most products and services offered are unique to Civil Defence Supply. Armadillo Tactical Riot Shield – the worlds only patented interlinking riot shield system – in service with numerous national Police and Paramilitary Forces. The UK Prison Service is entirely ARMADILLO equipped with its Control and Restraint programme sold on to other prison agencies internationally. Special sizes and types made to order. Full technical documentation and videos available.

Public Order Training – CDS has set up a complete support programme for the ARMADILLO. Liaison between the Foreign Office, MoD, DESO and Police Forces means that any overseas agency can receive not only the best training in ARMADILLO but also in street tactics and riot management. The UK leads the world in safe, non-lethal riot response, resulting in many major contracts – the most recent being the complete resupply re-equipping and training of the Palestinian Police Force in Gaza in August 1994.

Special Operations Equipment & Training – The company equips and trains all forms of Drugs, Firearms, Prisons and Special Operations Teams in night vision, methods of entry (MoE), intelligence skills, weaponcraft, communications and situation management. Instructors are all ex-services or ex-agency with recent operational experience. A full range of equipment to support these programmes is available.

Other services – Special Operations Hire Service with complete selection of equipment from door breaking tools and hydraulics to night vision, weapons and vehicles.

Reconditioned and pre-owned equipment resale including refurbished ex-military observation, night vision, EOD and electronic systems. In conjunction with Portfolio Section V Ltd – unique photographic and video services, fully equipped studio and editing facilities and production of tactical training handbooks and support material for a secure total package.

Copex 93: Civil Defence Supply is a registered defence contractor involved with research, development and manufacturer of police and military products with numerous items stock codified by United States, NATO and UK MoD users. The company established offices in Washington (USA), Halifax (Canada), Riyadh (Saudi Arabia), and Kuwait City involved with direct government consultancy and equipment supply contracts. The main areas of capability are internal security and riot control equipment and training. Prison riot control, special and covert operations, night operations, command and control support, intelligence analysis and management consultancy.

Trojan Operational Intelligence System. Now in UK police and overseas use, this highly advanced police and intelligence workstation allows forces to create data storage files, store images, enhance images, transmit and network data, mission plan and contingency support, as well as address tasks such as video enhancement. Civil Defence Supply is a registered bureau under the Data Protection Act and has worked with legal advisors on full Court veracity of digital and computer generated evidence material. No other enhancement and evidential system shows such features to these levels.

Trojan Criminal Intelligence Computer System – Image Storage, Retrieval, Filing, Enhancement, Manipulation & printing – Full GIS Workstation.

Special operations hire – A Three year old service for police & official users only. Everything from armoured cars to machine guns, nightvision & surveillance systems are available – extensively used by UK Police.

Night vision sales – CDS “Is largest dealer in secondhand night vision equipment”.

Co Info (undated): Dragon Portable Searchlight, Remote Control Operation (NATO Stock No X2-6230-99-728-7297) 100 Watt Dragon Mk.2 with remote control. Infrared Systems: Night vision enhancement

Export/Imports:

COIN 92/3 – Multi-role Turret (Thermal Imaging Surveillance system) exported/in use with Royal Hong Kong Auxiliary AF S76 helicopter.

Additional Information:

COIN 92/3 – Thermal Imaging Common Modules (TICM) – This is a multi platform modular thermal imaging system which is now in large scale production for the UK MOD – over 2000 sets have been supplied to Army, Navy, Air Force & throughout

the world. Multi-role turret (MRT-S) is a versatile, compact thermal imaging system suitable for helicopter & fixed wing aircraft (subsonic) – system is currently in production for search & rescue, economic exclusion zone, maritime patrol, general security and border surveillance operations. In use with Royal Hong Kong Auxiliary AF S76 helicopters.

Sea Owl Passive Identification device.

Hel-Tele TV system for helicopters – is a broadcast standard television surveillance system designed for mounting in a helicopter. The system provides long range, real-time airborne surveillance to meet the requirements of the Police, military, para-military, civil and other security forces. Heli-Tele consists of a colour camera with a high magnification zoom lens, mounted on a gyro stabilised steerable platform. The operator can steer the camera & adjust the zoom. Video information is transmitted to any number of ground stations via an microwave link – which has a range of 90km. A thermal imaging sensor is available for night time/ bad light operations.

Phoenix Thermal Imaging System – Remote piloted Vehicle (RPV) – integrated battlefield surveillance system.

Thermal Imaging Surveillance System – based on the V3900 Thermal Imaging sensor – this system provides 24hr long range detection & identification.

PYRO 2000 Handheld Thermal Camera.

Copex 93: Pyro 2000 Handheld Thermal Camera on display.

BDEC 95: Thermal Imaging Systems for naval applications. V3900 series thermal imaging sensor, Periscope systems.

Thermal imaging systems for weapon aiming, fire control and surveillance. Land Vehicle sights: GEC Marconi Avionics, Sensors division produce a comprehensive range of sights and sensor systems designed for installation in armoured fighting vehicles.

Modular thermal imaging sensors (M-TIS). SS600 series 3 thermal imager is used as primary sensor for long-range passive surveillance and reconnaissance systems. Search & Track sensors

Hand held thermal camera: Pyro 2000.

GPT Ltd (GEC Plessey Telecom)

**Edge Lane
Liverpool Merseyside L7 9NW
UK**

CAAT 14/4/88: Hawkeye recently supplied portable night-vision surveillance telescopes to Undisclosed Middle East Police Force.

Additional Information:

COIN 90 – Model HT4 Thermal Imager, Hawkeye Vehicle / Airborne Surveillance systems, Model HT10 Thermal Imagers.

Imagebase Technology Ltd

**Research House, Fraser Road
Perivale Middlesex UB6 7AQ
UK**

Tel: 081 991 1396 Tlx: Fax: 081 991 2698

Source Ref: Copex 93, Co Info 11/93 (Copex), INDEPO 94 Catalog, JDW 10/9/94, Copex 94 Catalog Exhibition: Copex 93, Indepo 94, Farnborough 94, Copex 94

Export/Imports:

Co Info 11/93: Imagebase Photofone exported to the following countries / organisations: CIA, Customs & Excise (UK), DEA (Drug Enforcement Agency), FBI, Immigration (Antilles, Bahamas, Belgium, Canada, Denmark, Germany, Holland, Mexico, Portugal, UK, USA),

Interpol (Austria, Bahrain, Belgium, Denmark, France, Holland, Italy, Sweden, Switzerland, UK), Metropolitan Police (UK), Ministry of Justice (Japan),

Police (Denmark, Germany, Holland), Royal Canadian Mounted Police RCMP

Images transmitted include Mugshots, Fingerprints, Surveillance Photographs, Travel Documents

Embassies (USA, Canada)

Additional Information:

Co Info 11/93: Imagebase Technology will be presenting the Photophone range of products. The range includes: the Stand-alone Photophone workstation, the PC-Photophone Upgrade Kit, the portable Photophone and the PC based photo database system called Photobank. Also being presented will be the new ruggedised Portable system called Photophone Xtra Duty.

The Photophone is an interactive still video transmission system that sends and receives colour pictures across standard telephone and ISDN lines, via satellites and portable communications. Images can be labelled with text, indicating which picture is of interest.

The photophone is part of an image product portfolio that Imagebase market in the UK. The photobank product uses the latest technology to store and retrieve pictures and text together, and has a variety of applications such as storing pictures of suspects, fingerprints and providing forensic evidence.

INDEPO 94: Photophone still image transmission system. Photobank, an image database, allows photophone or other video images to be captured, stored on a PC system and converted for other PC packages. User groups include law enforcement and immigration authorities, armed forces and Interpol.

Copex 94: Photophone Still Image Transmission system. User groups include the armed forces, law enforcement and immigration agencies and the aerospace industry. Interpol is listed as a user.

Body Armour, Helmets, Vehicle Armour.

COPEX 90 – 75 Series Surveillance System, Scout Thermal Sights.

COPEX 86 – Closed Circuit TV (CCTV), Infra red (IR) tubes, Miniature CCTV. Series
75, 80 and 83. The 75 series based in the Miniature CCTV Camera Mk3 is designed
for surveillance in adverse conditions. The 80 Series comprises a pyroelectric thermal
image plus accessories for use in total darkness, fog or smoke. The 83 Series utilises
the Ticam high resolution 1” tube camera with wide choice of tubes such as SIT and
ISIT.

Intergraph (UK) Ltd

**Delta Business Park,
Great Western Way
Swindon SN5 7XP
UK**

Tel: 0793 619999 Tlx: Fax:

Holding Co: (91) Intergraph USA

Source Ref: IPEC 91 Catalog, Times 20/9/91, p7, Melbourne Age 14/9/95

Exhibition: IPEC 91

Export/Imports:

Age 14/9/95: Intergraph are both supplying and operating a police command and
control system for the Victoria Police in Australia.

Additional Information:

Age 14/9/95: A new command and control system being supplied to Victoria Police,
Australia. By 2001, each police car is expected to have a portable personal computer.
The PC will link up with the \$160 million computer generated call-taking and dispatch
system being tested by Intergraph. Using satellite technology every police car in
Melbourne will be tracked along screens staffed by civilians. The computers will help
operators decide which patrol cars to send to incidents. Thanks to a giant computer
driven map of the city being compiled by Intergraph, the operators will be able to

tell police all the relevant details about the address they visit. Officers will know
immediately whether, for example, the owner is known to the police or if weapons are
inside. Eventually it may provide plans of the house in case of sieges.

Times 20/9/91: Command and Control systems developed by Intergraph (US). The
most sophisticated police computer installed in Britain, that should play an important
role in tackling inner-city riots was unveiled by the Cleveland police force. The
heart of the computer is a geographic information system which, when an incident
is restored, can instantly display a map showing streets, buildings and incident's
location. The map also shows the locations of police vehicles and officers. Plans
to link police vehicles to the system, providing more secure communications than
radio and also plans to introduce a facility for tracing telephone calls. The system,
developed by Intergraph and supplied to US Forces, is able to turn two dimensional
plans of buildings into three dimensional drawings.

IPEC 91: Dispatch management system (DMS) “the most advanced command &
control system of its kind in the world” – chosen by Cleveland Constabulary. DMS
integrates dynamic mapping into the dispatching process + relational database, also
video frame grabber & geographic information system (GIS).

DMA list 95: Optical & electro-optical systems.

Co Info 11/94: Maxi Kite individual weapon sight. The sight can be fitted/supplied with a suitable graticule to fully interface with a weapons ballistic capabilities. The sight is particularly suited for use on Sniper rifles, Heavy machine guns and Shoulder launched/crew served anti-tank weapons. KITE individual weapon sight. KOS (Kite Observation Sight) and MAXIKOS (Maxi-Kite Observation Sight) are the observation only variants of the weapon sights. BINOKITE Night vision binoculars, 2nd or 3rd Generation night sights. JAY Night vision goggles.

Copex 94: One of the world's leading optical equipment companies with sites in St. Asaph, Wales, Glasgow in Scotland (Barr & Stroud), and overseas offices on the East & West coasts of the USA.

Copex 93: Pilkington Optronics employs some 1,400 people with a turnover in excess of 85 million pounds. Pilkington Optronics design, develop and manufacture a range

of state of the art image intensified sights for surveillance and weapon aiming. The present range of products has been developed to meet the demanding requirements of today's military forces throughout the world. Pilkington Optronics are the UK's premier supplier of Optronic equipment to the UK MoD.

JDW 8/10/88: Pilkington Optronics encompasses the activities of Pilkington PE, St Asaph, Wales and Barr & Stroud, Glasgow. While Pilkington Optronics only contributes 5% to the total sales of the parent company, in its own specialist areas of sighting systems, thermal imaging equipment and periscopes the company is a major player.

Pilkington PE Ltd

Export/Imports:

Securex 94: South Africa representative for PK Electronics is Night Vision Optics.

Offices in Hamburg (Germany), New York (USA) and London (UK).

Co Info 6/92: PK products received by intelligence, police and army departments of more than 40 countries throughout the world.

Additional Information:

Co Info 3/95: PK-115-D Digital Monitoring system is the latest generation of "state of the art" recording systems. Provides facilities to monitor all forms of communication ;

voice, fax, modem, radio communication or data. Offers instant target information.

PK 115-SS Cellular Telephone monitoring system – due to the increased use of cellular telephones by criminals and subversive groups, it has become necessary to provide a system which will effectively lock onto and intercept these calls. PK 115-SS consists of a number of standard models that can be configured. Provides from a min 4 channel to 40 channel system for national network monitoring – provides scanning of all cell site control channels, automatic search for mobile conversations by mobile telephone number or by called number.

PK 2115 Telex Monitoring system, PK 4555 Day & Night camera, PK 5190 Video camera in a Cassette/Radio, PK 825 Quartz 3 Channel receiver, PK 855 Professional RF Detector, PK 1015-SS Professional Receiver, PK 5125-S Pocket CCD Camera with TX/RX: designed for high risk surveillance operations, PK 1405-S Remote controlled Miniature mains powered transmitter available in VHF, UHF or SHF, PK 370 Night vision video camera.

IDD 95: Design, development and manufacture of professional electronic intelligence gathering and security equipment. Procurement services & specialist training courses. Representing PK Electronic International group of companies. Batons, electronic; Riot Shields; Sprays / Dispensers, anti-riot; Water cannons; Explosives / weapon search equipment; Police & Gendarmerie equipment; Fingerprinting equipment; Surveillance & identification systems; surveillance & identification systems, TV;

Copex 94: New range of surveillance and counter surveillance equipment, together with its new monitoring and interception systems for telephone, facsimile, data, cellular and pager networks. PK Electronic International offers a wide range of equipment and services specifically designed to meet the needs of our clients.

IDD 93 – Electronic Batons, Riot Shields, anti-riot sprays / dispensers and aerosols, water cannons, explosives / weapons search equipment, explosives disposal equipment, Fingerprinting equipment, surveillance & identification systems,

Copex 93: The leading supplier of electronic security equipment to governments, Law Enforcement Agencies and Military users worldwide is exhibiting its latest range of surveillance and counter-surveillance equipment, together with its new monitoring and intercept systems for the facsimile, cellular and pager networks. PK Electronic International offers a wide range of equipment and services specifically designed to meet the needs of our clients. In addition to manufacturing specialist equipment, we can also offer Research & development, Training, Consultancy and Procurement Services.

Co Info 93 – PK 100 Telephone Analyser, Used to record calls from monitored phone lines. PK 855 Professional RF Detector, PK 1220 Telephone Tapping Detector, PK 015 Relay Detector, PK 6675 Telephone Line Guard, PK 195 Digital Voice Changer, PK 870 Miniature Transmitter Detector, PK 695 Tape Recorder Jamming Generator, PK 240S Multi purpose module transmitter. PK1015 Professional Surveillance Receiver, PK 1950 SS Digital (Non Tape) Recorder, PK 845 Telephone Probe "The Extractor", PK 5125 Monochrome Miniature CCD Camera, PK 5190 Video Camera Built into Radio

recorder. PK 1780 Video car Aerial Surveillance System, PK 4555 Day & Night Vision Laser Camera, PK 370 Night Vision Camcorder, Training and consultancy offered on the following areas: Surveillance Techniques, Electronic Tactical Surveillance, Strategic Counter Surveillance, Covert Entry Techniques, Telecommunications Monitoring, Secure Communications networks, Software applications, Optical Day & Night Surveillance, Static & Mobile video observation, Tracking & location. PK also offer project engineering for governments, national intelligence headquarters, securing embassies, to "Nationwide network monitoring of telephone exchanges.

" No 1 Government supplier of surveillance technology". Telephone, Telefax, Telex Monitoring Systems. PK 115-S Computerized telephone monitoring system, PK 1115 Fax-Scan – Telefax Monitoring System, PK 2115 Telex-Watch – Telex Monitoring System, Magsearch.

Links with MIL Electronics – PK used to be based at 47 Upper Grosvenor, Mayfair – Now Address of MIL Electronics.

Co Info 6/92: PK 140-S FM Telephone transmitter, PK 125-S Telephone and room monitoring transmitter, PK 215-S Mains transmitter Module

Co Info Sheet 9/7/91 – PK 855 RF Multi Room Detector System.

Copex 87: "The world's leading manufacturer and supplier of high level, covert security and surveillance equipment". On display: Micro transmitters, receivers, scramblers, telephone analysers, night vision, covert/overt video surveillance systems, anti-riot material.

Export/Imports:

Intersec 2/95: Racal Radio have announced two orders from the Bolivian Armed Forces for Syncal 2000 tactical HF communications systems for use in military and anti-narcotics drives. For immediate delivery, the manpack versions of the digital PRM4790 family form part of an on-going relationship with the Bolivian Armed Forces over the last 10 years.

JDC 2/95: Undisclosed amount for the supply of Syncal 2000 tactical HF communications systems to Bolivian Armed Forces. The British Home Office overseas

drug related assistance programme has funded some elements of the contract. Racal Radio has played a role in the assistance programme for over 5 years.

JDC 2/95: 30 million (+47 million+) from Central European Govt to supply the latest manpack and vehicle mounted military tactical radios from the Panther radio family, as well as surveillance and direction finding equipment. The contract also covers a local manufacturing agreement, with local companies undertaking production and servicing with effect from 1996.

JDC 7/94: Unspecified South American Countries. Contract for 25 million for high-frequency direction finding equipment, and a wide range of tactical radio equipment for both manpack and vehicular use, along with logistic support.

JDW 19/1/91: 2.2 million contract with unnamed Middle East customer for Tactical Area Communications network (TACNET) systems.

Additional Information:

BDEC 95: Simulator for communications and electronic warfare.

Tactical radio systems – HF and VHF manpacks, mobile and base stations. PRM 4790 – HF Transceiver, VRQ 319/BCC 39 HF transceiver, PRM 4700A tactical VHF/FM transceiver, PRM 4720A tactical CHF/FM personal transceiver,

Tactical radio systems for frequency hopping and special forces networks – Jaguar-V VHF/FM transceiver operates in the freq range 30–88 MHz and offers electronic counter-counter measures (ECCM) and is operational with many defence forces throughout the world.

Jaguar-U UHF AM/FM transceiver, Caracal – lightweight and compact VHF/FM transceiver – both narrow and wideband hopping are available, includes digital encryption facilities.

Cougarnet: is a completely integrated communications system designed for police, security and special forces. Provides a totally secure FM radio communications system based on a VHF/UHF personal radio. A cougarnet system can be assembled from a number of standard modules.

Intersec 7-8/94: Racal Radio have released Talon, an automatic number plate recognition system based on a new generation of pattern recognition techniques using neural network technology. It is designed to read number plates by day or night, in a wide range of environmental conditions, it has applications from simple access control to city centre security, border surveillance and road traffic monitoring.

Copex 93: COURGARNET system provides robust and waterproof VHF/UHF overt and covert communications.

COPEX 90 – Cougarnet – An Encrypted area communication system – specially designed for use with paramilitary, police & special forces.

Export/Imports:

JDC 2/95: 12.5 million contract from undisclosed Southern African country for the supply of HF tactical radios. The radios will be completely assembled in territory from parts manufactured locally, supplied by kits of components supplied from the UK.

FIS South America 93: Listed as exporting “communications equipment” to South America. Value greater than 10 million.

FIS Australia 93: “communications equipment”. Value greater than 10 million.

IDEC 88/9: Contracts in USA, South America, Middle East, Australia, UK and Europe.

CAAT 9/6/88: Plessey to supply CCIS computerised battle management system to Indonesia.

JDW 30/4/88: Indonesia is the first customer for the Generics Command and Control information system (CCIS) developed by Plessey Defence Systems.

Plessey recently won a UK MoD contract for an Automated Computer Assisted Electronic Warfare System (ACEWS). This also uses the Generics product to provide assimilation of complex data.

Also supplying command systems, radar and torpedo launchers for Vosper Thornycroft/Italthali co-production agreement for anti-submarine patrol boats.

CAAT 16/4/87: 20 million contract with Egypt for electronics defence system.

Additional Information:

BDEC 95: Information systems for command and control. Military electronic office.

Electronic warfare systems and equipment: Specialises in the design and manufacture of communications intelligence (COMINT) systems. Electronic Support Measures (ESM), and Electronic Counter Measures (ECM) can be integrated into command,

control and intelligence systems (C3I).

PVS3800 the generic name for ESM systems based on the PVS3800 receiver. Provides Signal acquisition, signal analysis, signal monitoring and Direction finding.

FIS S.Am 93: Communications equipment

IDEC 88/9: "World leaders in the techniques of designing strategic and tactical command and control information systems (CCIS), which can be configured as independent units, for intelligence or for task force management, or can be integrated into large strategic management and command systems."

Detailed street plans, complete with highlighted landmarks, can be displayed, in support of local actions or surveillance.

JDW 30/4/88: Generics is a software orientated CCIS designed to manage, manipulate and display information from sources such as electronic sensors, manual input and radar. The information is stored in a distributed relational data base management system and can be processed and related to high resolution colour map displays. Generic's software is written in Ada, the language being adopted by NATO for all future processor based defence systems. Generics is available in a variety of configurations – specialised single operator workstations to integrated multi-position networks.

Copex 86: A world leader in the supply of secure survivable C3I systems, is presenting the Integrated Command System, ICS, suitable for use in major operation centres. The system consists of a database developed by Plessey, a large screen display and a number of workstations. Maps, overlays, automatic vehicle location, documents and photographs can be captured as computer based data and displayed on high resolution graphic workstations.

Additional Information

Co Info 11/93: Range of Covert Audio Intercept equipment and systems.

Concealable Transmitters (4001 QTX V, 4002 QTX U), Voice activated Transmitter Series (4005-VOXTX-W, 4006-VOXTX-V, 4007-VOXTX-U), Ultra Miniature transmitters (4010-UMTX), Long Term Transmitter Series (4015-LTTX9-W, 4016-LTT28-W), Sub-Carrier Transmitter and Decoder (4020-SUBTX-W)

Stehoscope Transmitter Series – alternative means of transmitting conversations from the target room without entry. (4025-STTX-W, 4026-STTX-V, 4027-STTX-U)

Long range transmitters (4030-LRTX2-V, 4031-LRTX5-V, 4032-LRTX10-V).

Disguised Transmitters: Pen Transmitters (4100-PENTX-U), Lighter Transmitter (4105-LIGTX-U), Calculator Transmitter (4110-CALTX-U), Credit Card Sized Calculator Transmitter, Pager Transmitter (4115-PAGTX-U), Belt Transmitter (4125-BELTX-U), Cigarette Pack Transmitter (4130-CIGTX-U), Briefcase Transmitter (4135-BCTX-U), Ashtray Transmitter (4120-ASHTX-U), Jewelry Encased Transmitters (4140-JETX-W).

Mains powered transmitter Series: Mains module (4200-MMTX-W, 4201-MMTX-V, 4202-MMTX-U), Main Plug Adapter Transmitter (4205-MPTX-U), Mains Outlet Transmitter (4210-MOTX0U), Remote Activated Mains Transmitter (4215-MRTX-W, 4216-MRTX-V, 4217-MRTX-U, 4217-MRTX-U).

Telephone Transmitters: Micro-processor Driven Telephone Transmitter (4300- TTX-MP-U), Fax Line Transmitter (4305-TTX-FAX-U), Combination Room and Telephone Transmitter (4315-TTX-COM-W, 4316-TTX-COM-V, 4317-TTX-COM U)

Surveillance Receivers, Crystal Controlled Briefcase Receiver/Recorder (4410-RXB3-V, 4411-RXB2-U).

Global Remote Surveillance Command Center: Monitor a room in New York when you're in Paris or Cairo. Access covert wireless radio transmitters from anywhere. (4465 GB2).

Infrared Long Range Transmitter System (4500-IRTX), Audio Surveillance Probe (4505-ASPR), Laser Surveillance System – when access is impossible, picks up vibrations from window surfaces, the laser beam is then demodulated and converted to audio signals (4510-LASR).

Covert Room and Telephone System (4515-CRTM), Infinity Monitoring Series (4520-INF-H, 4521-INF-A, 4522-INF-5, 4523-INF-V), Passive Line Monitor (4525-PASLM),

Carrier Current System – allows direct audio surveillance utilizing existing AC power cable as both transmission path and power source. (4530-CARRIER)

Tracking Cellular Intercept System (4615-TCEL-INT), Facsimile Intercept System (4600-FAX-INT), Four Line Intercept System (4605-FAX-INT), Cellular Phone Intercept System (4610-CELLCON-CTPS-8804), Computer Intercept System (4625-COM-INT), Dialed Number Telephone Intercept System (4620-DNR-INT), Dialed Number Recorder Briefcase (4621-SLV-INT), Digital Pager Intercept System (4630-PAGER-INT), Telex Intercept System (4635-TLX-INT).

COIN 90 – Pocket Communicator, STG 4415 Facsimile Intercept System. Offices in USA – PO Box 427, Rye, NY 10580. Tel 914 934 8078. France – 26 Place Vendome, 75001 Paris. Tel 297-56-00. Tlx 2155241. Montreal, Milan

Co Info 87 – Wireless Video Surveillance & security systems. CVS 2000 series video. CVS 2010 – video camera disguised as a fire extinguisher, CVS 2020 – leather bound book, CVS 2030 – attache case, CVS 2040 – picture frame, CVS 2050 – stereo radio, CVS 2060 – decorative wall clock, CVS 2070. Within each unit is a state of the art transmitter with built in antenna that relays video of the surveillance area to a remote monitor. The entire CVS 2000 series can be activated by standard on/off switch, or by optional remote control, magnetic trip sensors, infrared motion detectors, or sound activation depending on particular surveillance or security needs.

Export/Imports:

CCTV Vol 1.3: Contract to supply Spain's Basque Police with system for the transmission of data between mobile policing situations.

Additional Information:

CCTV Vol 1.3: TV2 Ltd supplies a range of broadcast facilities and equipment. Announced a contract to supply Basque Police. Aerlyper SA (Madrid, Spain) leads the contract. The system is to provide transmission of data between mobile police situation, in particular sending live video and thermal pictures integrated with GPS data between the ground, aircraft and control centres. TV2 is supplying a range of wireless camera systems, microwave and communications equipment as well as a Global Autotracker intelligent antenna system. The Global Autotracker sends pictures from a police helicopter approx three times further than conventional microwave antenna systems, so extending the practical range of operation. It also offers police the capacity to send on the same signal a range of data such as time, date and grid reference, thus reducing the need for radio talk. Because it is highly directional, it has a high degree of built-in security from unauthorised interception.

Copex 94: Live microwave transmission for security and surveillance. In addition to consultancy and systems interrogation, TV2 offers a range of intelligent, steerable antenna systems, called Global Autotracker, for live transmission over distances up to 140Km. Already in use with UK and European police forces, the Global Autotracker has also been commissioned by Defence Ministries.

Shares the same London & Paris address with Surveillance Technology Group.

Provides body armour / protection, bug alert, telephone analyzers, wiretap detection / defeat systems, transmitter locator / verifiers, bomb protection, infrared viewing systems, electronic lie detectors.

Predator 1 – 2nd Generation night scope, Predator VI – Hands free Goggles.

NF-2 Nightfinder Binoculars, NF-1 Pocketscope, NF-3 Goggles.

NVD-5 Active (Infrared Pocketscope, NVD-10 Goggles).

COIN 90 – Invisible Safety Shield – Infra Red sensors.

COIN 92/3 – LR 3000 hand held transceiver and repeater system, XN-3 Extend-R-Range amplifier, SC 225 Portable radiotelephone, DF 42 direction finder. Secureline 440 voice and data encryption system – unlike other MSA approved devices (should this be NSA approved ?), the Secureline 440 does not require government agencies to provide classified encryption codes, so there is no concern about unauthorised outsider monitoring.

VL5000 counter surveillance receiver – lightweight and compact system for detection of covert radio frequency emissions.

Covert video surveillance system Series 2000 – a series of disguised CCTV cameras that allow surveillance to be carried out in factories, offices etc. Each unit consists of a camera and a transmitter capable of sending video and audio signals to a nearby receiver. Type CVS 2010 is a camera disguised as a fire extinguisher, CVS 2020 as a leather bound book, CVS 2030 as an attache case, CVS 2040 as a picture frame, CVS 2050 as a stereo radio set, CVS 2060 as a decorative wall clock. Each will provide high resolution images and transmit them up to 8km away. Antanae-Eye AE60 surveillance system – CCTV camera in standard telescopic car aerial. CVS 380/390 discreet video systems – CV 380 – video briefcase or CVS 390 video speaker systems. Remote observation pod. Predator 150 Night vision Pocketscope / Riflescope.

CCX-1000 explosive vapour detector, LBD-400 letter bomb detector, CCX-2000 explosive detector, TX-2 Terrorist Trap – walk through system which can be installed as a free-standing arch or in a doorway and which scans all passers-by.

IDD 93 – Fingerprint Recognition equipment

Computer Sciences Corporation (CSC)

**El Segundo, CA,

Systems integration and outsourcing firm. Gross revenue \$2.5 bn to 3 bn. Approx 33,000 employees worldwide.

CEO: Van Honeycutt

import/exports:

Saudi Arabia Ministry of Interior System (SAMIS). Upgrade: SAMIS II (replacing Unisys running Unicos with IBM mainframe with client-server nodes). SAMIS/SAMIS II drivers licences, visas and "miscreant" identification/control (miscreants includes illegal workers, Shiite activists and Christian missionaries).

Control Data Systems

USA

Systems design and IT supply. Worldwide agency and distribution.

Source ref: IT Trade '90 Bangkok; Computer '90 Bangkok; Co info 1990/1991; Thai Ministry of Interior info, 1990; Privacy Journal 7/90; Time, 24/6/91; Newsbytes 10/3/95

From the mid 1980s, Control Data has supplied the Population Identification Number Project infrastructure for the Thai Ministry of the Interior. This integrated system creates an ID card, electronic fingerprint and facial image, and electronic data link involving the entire population. It spans most government agencies and is controlled by the military/police dominated Interior Ministry.

Databases include: Central Population Database, National Election System, Political Party Database, Political Member Database, Voter listing, Electronic Minority Group Registration System, Electronic Fingerprint Identification System, Electronic Face Identification System, Population and House Report System, National Tax Collection System, Village Information System, Secret Information System, Public Opinion System, Criminal Investigation System, National Security System, Social Security System, Passport Control System, Driver Control System, Gun Registration, Family Registration, Alien Control System and Immigration Control System.

In 1995, CDS announced that it was installing the Computerized National Census and Services Project for the Bangkok Metropolitan Administration (BMA) project which will contain names, addresses, national ID card numbers, and census information such as birth and death records and address changes. The project is worth US\$11.5 million and CDS said that they expected to obtain other related projects. (Newsbytes 10/3/95)
